

Product Difenser

The company

## Company

### Made in Germany

The company Dilizer stands for high quality products in the field of hygiene and disinfection. The team is based on 30 years of experience in the area of product development, design, production and distribution.

So far, in the areas of production “Made in Germany” as well as worldwide distribution in other industries, the Dilizer brand is the next step into another field of expertise.

## Product Difenser

Professional hygiene for your visitors, customers and employees.

The Difenser by Dilizer offers you a reliable dispenser of hand sanitizer for your business. Let it be a shopping arcade, a retail store, an open-plan office or institutions like museums, libraries or agencies.

### Save working time with low maintenance effort

With up to 10ltr. Capacity the Difenser is designed for up to 20.000 bursts. The canister is exchanged 1 to 1 and is completed within a few seconds.

An antistatic canister collects excessive disinfectant.

## Simple operation

With the help of three rotary knobs the device - as well as the LEDs for permanent lighting - can be switched on and off and the amount of disinfectant can be adjusted from 0,5 to 3 ml per burst.

### Network operation and battery version

The “standard” Difenser is equipped with a 2,5 m long PowerCon cable.

In the battery version there is an additional rechargeable battery installed for an even more flexible use.

### Source of danger static charge

The spray chamber made of high-quality Corian ensures that no static charge can be passed on from the user onto the housing. This prevents the formation of radio waves in connection with alcohol. Corian corresponds to the fire protection class B according to EN 13501-1.

### Even dispensation

The specially designed outlet nozzle ensures an even and targeted dispensation of disinfectant in the hand. Thus, the adjusted output quantity is used completely by the user.

### No empty bursts thanks to detection of disinfectant

With the help of integrated sensors, the Difenser recognizes when no more disinfectant is sucked in and indicates this with red LEDs.

After the canister is changed all hoses are filled automatically, so that the adjusted quantity is always dispensed.

## Product Difenser

### Easy transportation

Due to the built-in inclination sensor the device recognizes when it is, for example, tilted for transportation. It automatically closes all hoses and switches off the trigger sensors. This prevents disinfectant from escaping.

### Easy to handle

The Difenser can be easily positioned thanks to the recessed handle and the transport roller. The 45 x 45 centimeter large stainless steel base plate always ensures a stable stand.
